

Tavium

Presentation

[About us](#)

Welcome to the world of innovative investment company Tavium.

At the heart of our approach is the use of an artificial intelligence robot known as SmartTrader (ST). ST is designed to collect and analyze data from financial markets in order to make informed investment decisions.

We are proud of our focus on artificial intelligence and its ability to analyze huge amounts of data with a high degree of accuracy and reliability. ST helps us make informed investment decisions and optimize the trading process to achieve maximum profit.

We strive to be at the forefront of financial technology by applying advanced methods to achieve the financial success of our  clients.

Our team of experts has developed a high-tech system that allows ST to carry out accurate and timely analysis:

◆ Events

◆ Trends affecting financial markets

License

Company registration

Registering a company in both countries can provide unique opportunities for international expansion, access to large markets and take advantage of each country's business environment. However, before registering a company in any country, it is recommended to consult with professionals and study the legal and tax aspects in order to make an informed decision.

Hong Kong

Attractive business climate

Hong Kong is known for its low taxes, simple registration procedures and openness to international investment.

Strategic location

Its location in Asia makes Hong Kong an ideal bridge between the mainland Chinese mainland and the rest of the world, providing access to a large market and international opportunities.

Political stability and the legal system

Hong Kong has a stable political environment and an independent legal system, which contributes to the trust of investors and business partners.

Great Britain

International reputation and prestige

The UK is one of the world's leading financial centers with a long history of financial expertise and a robust legal system.

Wide access to international markets

Registration of a company in the UK provides access to European and international markets due to the country's membership in the European Union (before leaving it) and a network of business agreements with other countries.

Innovation environment and financing

The UK is a hub for innovation and offers a wide range of funding programs and tax incentives for startups and technology companies.

How we work

Tavium, a company that uses artificial intelligence for trading, works as follows:

Data collection and analysis

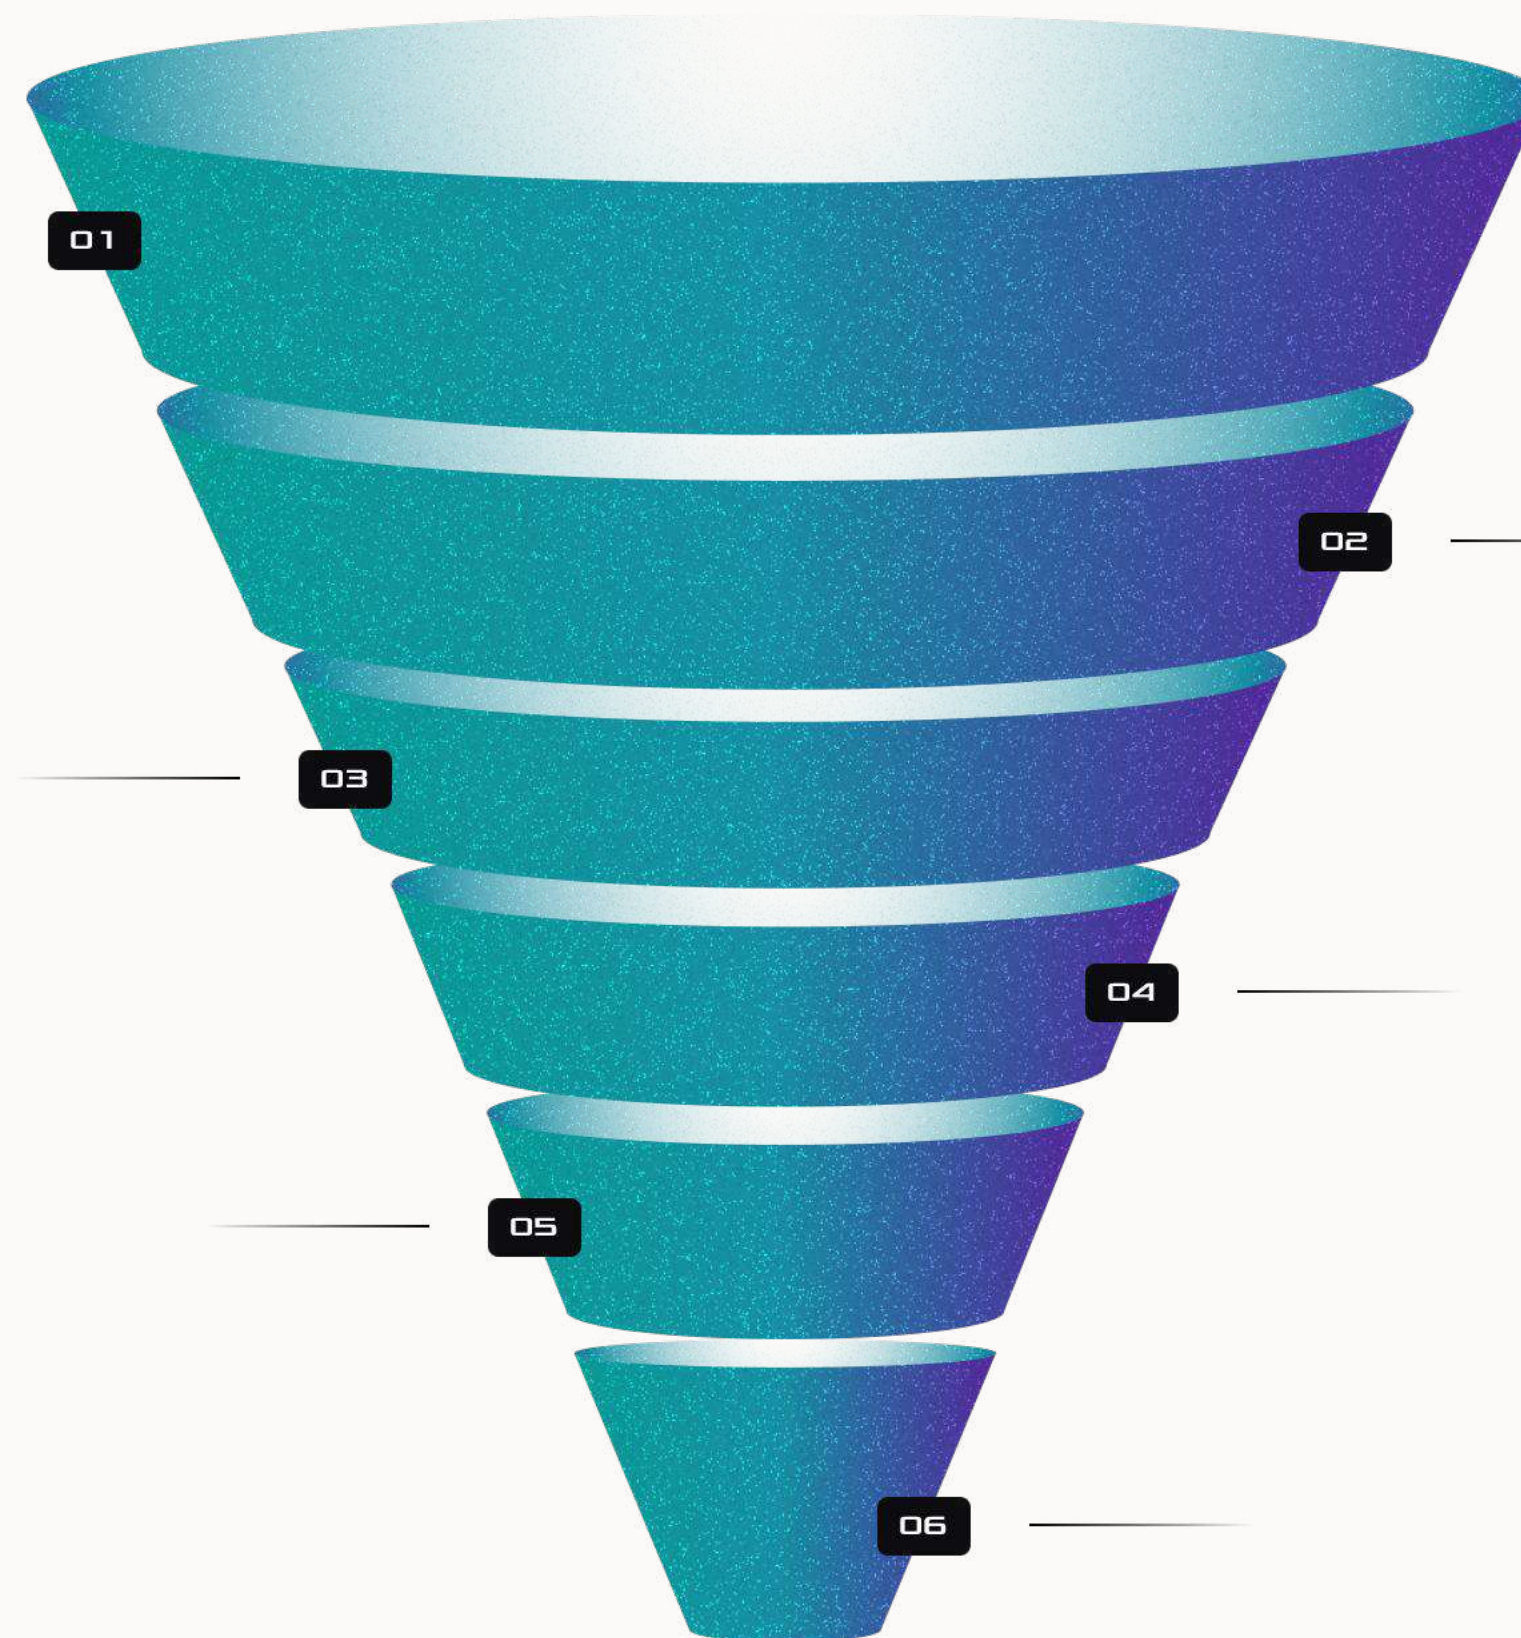

Tavium Smart Trader collects and analyzes data from financial markets, including news, events and trends, in order to make investment decisions based on data analysis.

Execution of transactions

ST performs trading operations on the exchange based on the decisions made and uses computer algorithms to minimize risks and maximize profits.

Portfolio Management

An investment company uses ST to manage its portfolio, including asset allocation, balance and risk management.

Decision making

Based on data analysis, ST makes investment decisions, determining when to buy or sell stocks or other financial instruments.

Monitoring and analysis of results

ST constantly monitors the results of its trades and analyzes them to improve its strategies and algorithms.

Customer service

The investment company provides clients with access to investment products managed by ST, as well as advice and support on all issues.

Thus, an investment company working with a robot trader based on artificial intelligence is based on data analysis, making informed investment decisions and using computer algorithms to optimize the investment process.
